

PRACTICAL – 8

Aim: - Write a program to design student registration form using AWT components.

Code: -

```
import java.awt.*;

class Registration extends Frame{

    Registration() {

        Label name    = new Label("Name : ");
        Label enrollno = new Label("Enrollment No : ");
        Label email    = new Label("Email : ");
        Label gender   = new Label("Gender : ");
        Label dob      = new Label("DOB : ");
        CheckboxGroup cggender = new CheckboxGroup();
        Checkbox male   = new Checkbox("Male", false);
        Checkbox female = new Checkbox("Female", false);
        TextField tfname = new TextField();
        TextField tfenrollno = new TextField();
        TextField tfemail = new TextField();
        TextField tfdob = new TextField();
        Button submit = new Button("Submit");

        add(name);
        add(enrollno);
        add(email);
        add(gender);
        add(male);
        add(female);
        add(tfname);
        add(tfenrollno);
        add(tfemail);
```

```
add(tfdob);  
add(submit);  
add(dob);  
name.setBounds(15, 30, 100, 20);  
tfname.setBounds(120, 30, 250, 20);  
enrollno.setBounds(15, 60, 100, 25);  
tfenrollno.setBounds(120, 60, 250, 20);  
email.setBounds(15, 90, 100, 20);  
tfemail.setBounds(120, 90, 250, 20);  
dob.setBounds(15, 120, 100, 20);  
tfdob.setBounds(120, 120, 250, 20);  
gender.setBounds(15, 150, 100, 20);  
male.setBounds(120, 150, 250, 20);  
female.setBounds(120, 170, 250, 20);  
submit.setBounds(30, 250, 200, 30);  
setTitle("Registration Form");  
setSize(460,390);  
setLayout(null);  
setVisible(true);  
}  
public static void main(String[] args) {  
    new Registration();  
}  
}
```

Output: -

Registration Form

Name : Deepak Sharma

Enrollment No : 190303105026

Email : 190303105026@paruluniversity.ac.in

DOB : 01/01/2001

Gender : ☒ Male
☐ Female

Submit

PRACTICAL – 8.1

Aim: - Write a Java Program for Calculator Operations Using AWT Controls & appropriate layout manager.

Code: -

```
import java.awt.*;
import java.awt.event.*;

class MyCalc extends WindowAdapter implements ActionListener{
    Frame f;
    Label l1;
    Button b1,b2,b3,b4,b5,b6,b7,b8,b9,b0;
    Button badd,bsub,bmult,bdiv,bmod,bcalc,bclr,bpts,bneg,bback;
    double xd;
    double num1,num2,check;

    MyCalc(){
        f= new Frame("MY CALCULATOR");
        l1=new Label();
        l1.setBackground(Color.LIGHT_GRAY);
        l1.setBounds(50,50,260,60);
        b1=new Button("1");
        b1.setBounds(50,340,50,50);
        b2=new Button("2");
        b2.setBounds(120,340,50,50);
        b3=new Button("3");
        b3.setBounds(190,340,50,50);
        b4=new Button("4");
        b4.setBounds(50,270,50,50);
        b5=new Button("5");
        b5.setBounds(120,270,50,50);
```

```
b6=new Button("6");

//MAIN METHOD where objects of MyCalc is instantaiated  
public static void main(String args[]){  
    new MyCalc();  
}  
}
```

Output: -

PRACTICAL – 9

Aim: - Write a program to demonstrate array index out of bounds exception.

Code: -

```
public class fact {  
    public static void main(String[] a) {  
        int number;  
        number = Integer.parseInt(a[0]);  
        int n = 1;  
        for (int i = 1; i <= number; i++) {  
            n = n * i;  
        }  
        System.out.println("The factorial of " + number + " is  
" + n);  
    }  
}
```

Output: -

```
PS D:\5th Semester\OOPJ\Lab> javac fact.java  
PS D:\5th Semester\OOPJ\Lab> java fact  
Exception in thread "main" java.lang.ArrayIndexOutOfBoundsException: Index 0 out of bounds for length 0  
at fact.main(fact.java:5)
```

PRACTICAL – 9.1

Aim: - Create an interface Account with two methods deposit and withdraw. Create class Savings Account which implements the interface. Write a custom Exception handler for Savings Account to handle the scenarios when withdrawn amount is larger than the balance in the account.

Code: -

```
interface Account {  
    void deposit(int amount);  
    void withdraw(int amount) throws InsufficientFundsException;  
}  
  
class SavingAccount implements Account {  
    int Balance = 3000;  
    public void deposit(int amount) {  
        Balance = Balance + amount;  
        System.out.println("Balance after deposit is : " + Balance);  
    }  
    public void withdraw(int amount) throws InsufficientFundsException {  
        if (amount > Balance) {  
            throw new InsufficientFundsException("Insufficient Funds");  
        } else {  
            Balance = Balance - amount;  
            System.out.println("Balance after deposit is : " + Balance);  
        }  
    }  
}  
  
class InsufficientFundsException extends Exception {
```

```
public InsufficientFundsException(String msg) {  
    super(msg);  
}  
  
}  
  
public class practical_9_1 {  
    public static void main(String[] args) throws Insufficient  
FundsException {  
        SavingAccount sA = new SavingAccount();  
        sA.deposit(5000);  
        sA.withdraw(3000);  
        sA.withdraw(6000);  
    }  
}
```

Output: -

```
Balance after deposit is : 8000  
Balance after deposit is : 5000  
Exception in thread "main" InsufficientFundsException: Insufficient Funds  
    at SavingAccount.withdraw(practical_9_1.java:13)  
    at practical_9_1.main(practical_9_1.java:30)
```

PRACTICAL – 10

Aim: - Write a program to demonstrate class object locking using method level Synchronization.

Code: -

```
public class practical_10 implements Runnable{
    public void run(){
        Lock();
    }
    public void Lock() {
        System.out.println(Thread.currentThread().getName());
        synchronized(this) {
            System.out.println("in block " + Thread.currentThread().getName());
            System.out.println("in block " + Thread.currentThread().getName() + " end");
        }
    }
    public static void main(String[] args) {
        practical_10 p = new practical_10();
        Thread t1 = new Thread(p);
        Thread t2 = new Thread(p);
        practical_10 p1 = new practical_10();
        Thread t3 = new Thread(p1);
        t1.setName("t1");
        t2.setName("t2");
        t3.setName("t3");
        t1.start();
        t2.start();
        t3.start();
    }
}
```

Parul™
University

}

}

Output: -

```
t1
t2
t3
in block t1
in block t3
in block t1 end
in block t3 end
in block t2
in block t2 end
```

PRACTICAL – 10.1

Aim: - Write a program that executes two threads. One thread will print the even numbers and another thread will print odd numbers from 1 to 50.

Code: -

```
public class practical_10_1 {  
    int counter = 1;  
    static int N;  
  
    public void odd(){  
        synchronized (this){  
            while (counter < N){  
                while (counter % 2 == 0) {  
                    try {  
                        wait();  
                    } catch (InterruptedException e) {  
                        e.printStackTrace();  
                    }  
                }  
                System.out.println(counter + " " + "odd");  
                counter++;  
                notify();  
            }  
        }  
    }  
  
    public void even(){  
        synchronized (this){  
            while (counter < N){  
                while (counter % 2 == 1) {  
                    try {
```

```
        wait();
    } catch (InterruptedException e) {
        e.printStackTrace();
    }
}
System.out.println(counter + " " + "even");
counter++;
notify();
}
}

public static void main(String[] args) {

    practical_10_1 oE = new practical_10_1();
    N = 50;
    Thread t1 = new Thread(new Runnable() {
        @Override
        public void run() {
            oE.odd();
        }
    });
    Thread t2 = new Thread(new Runnable() {
        @Override
        public void run() {
